## PROJECTS

- Music Lesson Schedule Builder** | *Java, IntelliJ IDEA, Python* October 2022/July 2023
- Programmed a custom schedule generator in both Java and Python for a school's music pull-out lessons, shuffling and randomizing 20 different lesson groups to comply with certain scheduling limitations as well as allowing for user-set parameters in terms of weeks, days off, and start dates. The Java version utilizes fundamental concepts of Object-Oriented Programming as well as implements a complete GUI using the Swing library. The Python version has similar functionality with a command-line interface style. ***Example CSV Export Here.***
- CUNYFirst Class Enroller** | *Python, Selenium, Web Automation* March 2023
- A Python-based automation tool designed to assist users in course enrollment. The program intelligently matches the user's current schedule with their desired schedule, enrolling or swapping classes as they become available. This project serves as a practical application of automation for educational purposes using the Selenium web driver.
